

ICE EXPRESS

SMALLEST FOOTPRINT – MOST FLEXIBLE OPTION

The Ice Express was designed with the small format retailer in mind. Using a standard 110V power supply and measuring slightly wider (4'4") and deeper (3'2") than a large French Door refrigerator, the Ice Express is well suited to stand side-by-side with existing kiosks such as the Redbox game and movie vending machines or popular soft drink vending machines. As soon as you connect the water supply and plug in your new Ice Express, you can start making and selling bagged ice and bulk water. This model is the perfect fit for small spaces at retail locations (e.g. convenience, auto parts, liquor and party stores), service locations (e.g. carwashes and marinas) and lodgings (e.g. apartment complexes, campgrounds, as well as hotel and motels). The Ice Express complements any environment that could benefit from having convenient, fresh ice and bulk water on site and on demand.

Our Story

Ice House America pioneered the ice vending category when it sold its first stand-alone ice vending machine in 2003. Since that time, we have been revolutionizing the way people think about bulk ice and water through innovative ice-making and delivery technologies and brand marketing. Ice House America's models are the leading destination for convenient, on-demand, fresh ice and water.

The Perfect Fit

The Ice Express can be a stand-alone vending machine or work in combination with a retail location. It is designed for small format retail stores and can be used to replace the existing ice supplier. Popular with small businesses such as C-stores, campgrounds, grocery stores and carwashes, this model can stand inside or outside the store to simplify the customer experience and allow for convenient ice purchases or B2B sales and is the perfect fit for small but under-utilized high traffic areas in existing retail space.

Eco-Responsibility

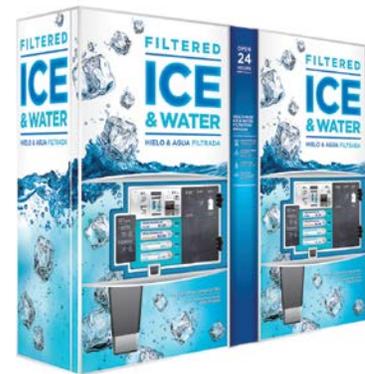

Ice House America's ice and water is produced fresh and on-demand using municipal-supplied water that flows through our filtration and sterilization process ensuring that customers enjoy clean, fresh ice and water with every purchase. Our ice and water vending machines have become the sustainable alternative to traditional ice manufacturing because typical ice-making creates supply chain waste, especially carbon emissions generated by distant manufacturing sites and delivery fleets burning fossil fuels. Moreover, as the convenient ice source serving the bulk ice requirements of scores of nearby businesses, Ice House America cuts down the need for cold storage and costly, inefficient in-house icemakers.

Technological Leadership

We've invested time and resources into making certain that Ice House America ice and water vending machines maintain their lead in durability, product quality and convenience. But, we did not stop there: everyday we seek new and better innovations that can improve mechanical performance, durability and the quality of our product — bulk ice/water. Don't just take our word. Come visit our ice vending machine manufacturing facility and see for yourself. See why our ice vending machines are the industry standard.

Back To Back

Side By Side

SmartIce™ Remote Management System

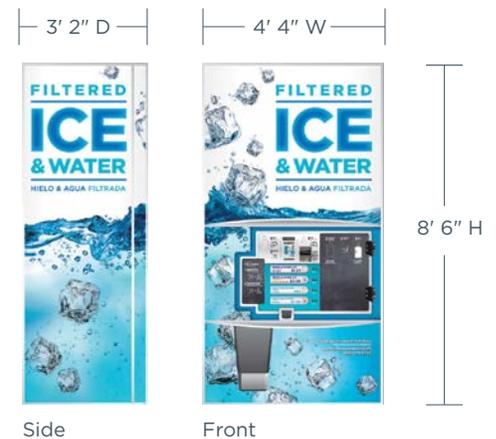

SmartIce™ Remote Management System, a web-based application, lets you manage all aspects of your Ice House America vending machine — including location information, product sales, technical operations, and customer service. It offers real-time access to operational status and current sales data. It lets you measure sales trends, benchmark locations and evaluate machine performance. Most important, all SmartIce™ information is housed on our secure servers and backed up daily.

Key Characteristics

- First ice and water vending machine under \$20k!
- Open 24/7.
- Minimal maintenance required.
- Inside or outside location potential.
- Allows retailers to have ice sales on consignment.
- Payment options: cash, credit/debit, vend coupons and tokens.
- Installed with SmartIce™ Remote Management System.
